

EM 8 Portable Log Siding Machine

The EM 8 Log portable seamless siding machines are robust and the profile is extremely realistic. This user-friendly machine is designed, engineered and made in the USA. The patented roll-forming profile is unique and looks great on the wall. Eastside's siding machines feature our original self-contained embossing system, which applies a natural wood grain texture to steel coil.

The EM 8 Log job site roll-former is a smart add for those looking to expand within the siding industry whether purchasing or renting the portable log machine. Our patented design (patent design USD#462,790) gives the exterior look of real wood logs, made of steel. This profile looks impressive on large homes that want to look of a log cabin and fantastic in most commercial applications. It is important to be aware that this profile does require a custom foam backer that not only supports the profile, but also gives added r-value.
